The Komori LS29 Debuts at Graph Expo '06

Komori will unveil the latest in half-size printing press technology at the Graph Expo Show, McCormick Place, Chicago, Illinois, October 15-18th.

The LS29 incorporates features and systems developed for the celebrated LS40 plus technologies unique to the short-run market. Full-automatic plate changers and auto-make ready sequencing, a world's first in this format, contribute to the fastest job-throughput in the business . . . how does 200 sheets in 6 minutes or 10 jobs in 1 hour strike you? Look out digital!

The latest generation of the flagship LS40 will also be demonstrated in a six-color, 28 X 40-inch format with in-line tower coater. Just released features for the 2007 model including new scanning and sheet handling systems will be on display.

The thriving Komori Spica will also be featured during the show. The Spica is a highly automated four-color, 29-inch convertible perfecting printing press and it is receiving rave reviews for its versatility, printability and affordability. Designed to compete in the ultra-short-run, 4-color printing market, the Spica offers numerous benefits over competing offset and digital presses in this segment.

Introducing New Cutting Solutions from Saber & Prism

While at Print, we encourage you to visit the Colter & Peterson booth (#1229). This exhibit will feature the latest in cutting system and material handling solutions including the newest model paper cutters from Saber and Prism.

New Komori 29-inch Press Installs in the Mid-Atlantic

Signature Printing (pictured) recently installed a new Komori Spica 429P 4-color, 29-inch convertible perfecting press as did Baltimore's Rainbow Printing of Maryland.

Both companies are realizing tremendous throughput with the Spica's automated make-readies and utilization of CIP4 ink key profile data.
